

Olympus D590 Lens Replacement

Written By: Joshua

INTRODUCTION

This guide shows how to replace the camera lens and surrounding mechanisms (including the motor).

TOOLS:

- [Tweezers](#) (1)

Optional, but helpful

- [Phillips #0 Screwdriver](#) (1)
-

Step 1 — Face Plate

- Flip camera so you are looking at the bottom.
- Unscrew all 5 base plate screws.

Step 2

- Lift open retainer clip by sliding the clip to the left and letting the clip pop up.

Step 3

- Unscrew 1 screw located next to the battery slot.

Step 4

- Turn the camera so the USB, AV and DC in/out rubber plate it facing you.
- Lift the rubber plate exposing the ports beneath.

Step 5

- Unscrew the 2 screws next to the USB and AC ports.

Step 6

- Use a flathead screwdriver or another flat opening tool to pry the the faceplate from the whole device.

Step 7

- Pull off the faceplate revealing the inside of the camera.
- Be careful because there is a connector that goes from the faceplate to the motherboard and if that line disconnects the camera will not power on through the on and off switch anymore.

Step 8 — Backplate

- Use a phillips head screwdriver to remove the 3 screws highlighted in the picture.

Step 9

- Unscrew the 2 screws located on either side of the flash.

Step 10

- Get a flathead screwdriver or an iPod opening tool (both are shown in this picture).
- Carefully pry off the blackplate from the remaining part of the camera.

Step 11

- Pull the backplate off.

Step 12 — LCD screen

- Unscrew 1 screw from LCD screen.

Step 13

- Remove the side pannel by sliding it off the body of the camera.
- Lift the camera NO MORE than 3cm to make sure all screws have been taken off.

Step 14

- Flip camera so you are looking at the front.
- Remove gray and blue wiring with tweezers by gently wiggling and pulling.

⚠ Be careful not to rip the wiring tape with the tweezers.

Step 15

- Locate the tape securing the wiring with the gray end piece located on top of the camera.
- Gently lift the tape till all wires are exposed.

Step 16

- Flip Camera to the bottom side as shown.
- Pull and wriggle the thin yellow wiring tape to detach it from the rest of the camera, while leaving it attached to the LCD screen.

Step 17

- Flip camera so the front is facing you.
- Locate speaker in upper right hand corner.
- Gently lift with tweasers.
- Feed wiring through designated spot so that it is no longer connected to the camera.

Step 18

- Lift the LCD screen so the thick yellow wiring is the only thing attaching the LCD screen to the camera.
- Gently pull the thick yellow wiring out by using the forefinger and thumb.

Step 19 — Lens

- Flip camera so you are looking at the back.
- Remove the 3 screws from the rear of the camera behind the lens.

Step 20

- Flip camera so the front lens is facing up.
- Unplug lens from logic board.

Step 21

- Flip camera over so lens is facing down and the back of the camera is facing you.
- Gently pull back wire that connects logic board to lens assembly so it is no longer connected.

Step 22

- Flip camera so the front is facing you.
- Carefully lift lens assembly out of camera.

To reassemble your device, follow these instructions in reverse order.
